

# Digital Tombstone

## STORY OF THE DECEASED

### TECHNICAL SPECIFICATIONS

iTernal is the first personalized interactive digital tombstone, a result of modern technological development which for the first time enables that we are able to take care of the memory we would like to leave for future generations. It is no longer just a head of the grave, holder of the name or an image of the deceased. With a selection of images and more information about the deceased, iTernal becomes a story of the deceased.

Until now, information of the deceased was reduced to a name, surname and year of birth and death. Traditional stone tombstones are cold and impersonal, stone is not a very flexible material ... iTernal does not require any hard and time-consuming work; it is flexible, allows constant changing of the content and has practically no limits of space.

The digital era which has not yet paved the way to the cemetery, enables that digital tombstones maintain the stories of ordinary people, so they each in their own way help to shape the history.

*The life of the dead is placed in  
the memory of the living.*

# Digital Monument

## STORY OF THE DECEASED

iTernal is the first interactive digital monument, a result of modern technological development which for the first time enables that we take care of people and events that are important for past, present and future generations. With a selection of images and more information about them, iTernal becomes a story of the deceased and the past events.

The history of a place is not only the dates and events that are important for the city. The past and present are created by people, each with their own story, a part of the whole.

The digital era which has not yet paved the way to the cemetery, enables today that we maintain the stories of people who lived and created the image of our places. Each in their own way, they help to shape the history.
